

Terminal showing virtual environment activation and app startup

Step 8: Verify the database and application status

In the Explorer sidebar, you'll see the `pocketsmart.db` file. If you try to open it, VS Code shows a warning that the file can't be displayed as text — this is expected, since it's a binary SQLite database file. The terminal should continue showing logs confirming the app is running.

Binary file warning for pocketsmart.db and terminal logs
